⁽¹⁾ The term "reserve" means that part of a mineral deposit that can be economically and legally extracted or produced at the time of the reserve determination. The term "economically," as used in the definition of reserve, means that profitable extraction or production has been established or analytically demonstrated to be viable and justifiable under reasonable investment and market assumptions. The term "legally," as used in the definition of reserve, does not imply that all permits needed for mining and processing have been obtained or that other legal issues have been completely resolved. However, for a reserve to exist, Hecla must have a justifiable expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with Hecla's current mine plans.

⁽²⁾ Mineral reserves are based on \$1200 gold, \$14.50 silver, \$0.90 lead, \$1.05 zinc, unless otherwise stated.

⁽³⁾ Mineral reserves are based on \$1200 gold, and a US\$/CAN\$ exchange rate of 1:1.37. Reserve diluted to an average of 34.7% to minimum width of 9.8 feet (3 m). Reserves at Casa Berardi were determined by Jonathan Archambault-Giroux, P. Geo., Que., Real Parent, P. Geo. Que., Sylvain Picard, P. Eng., Que. and Alain Quenneville, P. Eng., Que. unless otherwise stated.

Open pit mineral reserves of the Principal Mine were estimated in February 2011 by BBA Inc. based on \$950 gold and a US\$/CAN\$ exchange rate of 1:1. Reserve diluted to 10%.
